## *Cinematica* *Sound installation*

---

atelier oiï draws its inspiration from the natural world, its resources and its phenomena. Our creations embody the constant impermanence of nature, illustrating that change is the only constant. For this new installation, we wanted to illustrate the invisible world of sound.

Cinematica is a sound installation that makes the invisible vibrate. This sensory experience explores the boundaries between the physical and the emotional. The installation invites us to perceive the invisible magic of sound through an undulating choreography organised by various movements. Under the effect of the vibrations of ultra-low frequencies, the frame moves and captures the light. The various oscillating frames generate superimposed veils, fragmenting the space into a micro-architecture.
